WE TAKE CARE OF ...

- ✓ operating softswitch technology and networks
- ✓ back-office systems, processes and reporting
- ✓ porting, caller ID and directory assistance
- ✓ supporting emergency 911 services
- ✓ billing under your company brand
- ✓ customized marketing materials

8 REASONS YOU SHOULD BECOME A REINVENT PARTNER TODAY

Low Startup Costs

No need to invest in telecom infrastructure or technicians when you can use ours. Reinvent offers high-quality services based on industry-leading platforms and managed by our experienced softswitch engineers. There are no monthly program fees, minimum revenue requirements or term agreements when you sign up.

Reliability

Reinvent's cloud UC services are more reliable than startup hosted VoIP companies. We operate a proven, cloud-native geo-redundant communications platform connected to a diverse carrier-grade network.

CoBranded & White-Label Options

In our White-Label option, become a certified cloud communications provider through our network, tech, team and NOC. Set your rates and sell under your own brand. In our CoBranded option, set your rates and go to market under your brand "powered by Reinvent." Become a provider but turn over compliance and customer billing to Reinvent's experts.

Complete Solution

We offer advanced PBX, mobility and UC features as well as support for integrated multiparty video and collaboration, hosted fax, omnichannel contact center, CRM integration, Business SMS/MMS and Microsoft Teams Direct Routing. Plus, we're PCI and HIPAA compliant. And, we're continually adding functionality so you can meet customer demand.

Financial Stability

Reinvent is a subsidiary of Saddleback Communications, a profitable, debt-free enterprise of the Salt River Pima-Maricopa Indian Community. Unlike other hosted VoIP companies, we're here to stay. We're a well-funded organization with no chance of being sold to a larger competitor.

You're In Control

Our powerful turnkey solution is managed from quote to cash through our proprietary Reinvent Partner Portal (RPP), enabling you to go to market quickly and build a successful cloud voice business while keeping full ownership and control of your customers.

In-House Telco Expertise

We also have the benefit of our parent company's experience with 911, Local Number Porting (LNP), Line Information Database (LIDB) and Line Validation Administration System (LVAS). Unlike other VoIP companies. We don't rely on third parties to facilitate these critical functions, which can add complexity, cost and time to deploying services.

Private-label Billing

Reinvent's wholesale solution gives you the option to leverage our private-label billing services to produce branded, professional invoices – both print and electronic – as well as to accept payment via ACH, credit card or printed check. We include access to our industry-leading tax engine for up-to-date compliance with city, state and federal regulations nationwide.
